S. epidermidis ope Staphylococcus epi

Candida albicans

interfere with the expression of the toxins, thereby functioning as antimicrobial agents to render the microorganism avirulent. The DNA encoding this sequence can be used for diagnostic identification of pathogenic staphylococci which express the protein, and the resulting virulence factor.

                                                     ABN90538 to ABN93374 represent Staphylococcus epidermidis open reading frame (ORF) nucleic acid sequences which encode the amino acid sequences given in ABP31544 to ABP37960. The S. epidermidis sequences have antibacterial activity and can be used in gene therapy. The sequences can also be used in the diagnosis and treatment of bacterial infections, particularly S. epidermidis infections. The sequences can be used to screen for compounds able to interfere with the S. epidermidis life cycle or inhibit S. epidermidis infection.

N.B. The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 This sequence represents the staphylococcal accessory regulatory (SAR) A protein of Staphylococcus aureus. The SAR protein controls the expression of potential virulence factors, such as bacterial endotoxins. The SAR locus is thought to regulate exoprotein genes positively, at the mRNA level. This protein can be used for designing analogues which
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            1 MSKINDINDLVNATFQVKKFFRDTKKKFNLNYEEIYILNHILRSESNEISSKEIAKCSEF

(I) controls the expression of virulence determinants such as endotoxins in S. aureus. (I) is used to design analogs that interfere with expression of EVD, i.e. potential antibacterial agents and for generating specific antibodies which are used to detect (I) in microbial isolates or for affinity purification of (I). The nucleic acid (II) that encodes (I) or its fragments) can be used to identify S. aureus that express sar (and thus EVD) by usual hybridization and amplification tests, also for recombinant production of (I). This sequence represents the Expression of EVD and thus sequence represents the EXT of the method of Staphylococcus aureus sarA protein which is described in the method of
                                                                       9
                                                                                                      62

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               This invention describes a novel full-length Staphylococcus aureus accessory regulatory protein ((I), designated sar) which regulates the expression of S. aureus exoprotein virulence determinants (EVD). (I) controls the expression of virulence determinants (EVD). (I) in S. aureus. (I) is used to design analogs that interfere with expression of EVD, i.e. potential antibacterial agents and for generating specific antibodies which are used to detect (I) in microbial isolates or for affinity purification of (I). The nucleic acid (II) that encodes (I) or its fragments) can be used to identify S. aureus that express sar lend thus EVD) by usual hybridization and amplification tests, also for recombinant production of (I). This sequence represents a Staphylococcus aureus sarA protein which is described in the method of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    62

The present sequence is given in a specification relating to a method for identifying inhibitors of SarA (staphylococcal accessory regulator) function involved in the expression of Staphylococcal virulence genes. The method comprises contacting a candidate inhibitor with a SarA binding site of the agr (accessory gene regulator) locus in solution binding site of the agr. The identified inhibitor to the SarA binding site of the agr locus. The identified inhibitors are useful for preventing and treating staphylococcal infections.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             1 MSKINDINDLVNATFQVKKFFRDTKKKFNLNYEBIYILNHILRSESNBISSKEIAKCSEF

This invention describes a novel full-length Staphylococcus aureus accessory regulatory protein ([1], designated sar) which regulates the expression of S. aureus exoprotein virulence determinants (EVD). (I) controls the expression of virulence determinants such as endotoxins in S. aureus. (I) is used to design analogs that interfere with expression of EVD, i.e. potential antibacterial agents and for generating specific antibodies which are used to detect (I) in microbial isolates or for affinity purification of (I). The nucleic acid (II) that encodes (I) or its fragments) can be used to identify S. aureus that express sar (and thus EVD) by usual hybridization and amplification tests, also for recombinant production of (I). This sequence represents a Staphylococcus aureus sarA protein which is described in the method of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            epidermidis; open reading frame; ORF; bacterial infection;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    New accessory regulatory protein, sar, from Staphylococcus aureus, used to design analogs potentially useful as antibacterial agents -
   exoprotein virulence determinant; EVD; antibacterial agent; detection.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  1 MSKINDINDLVNATFQVKKFFRDTKKKFNLNYEEIYILNHILRSESNEISSKEIAKCSEF

ABN90538 to ABN93374 represent Staphylococcus epidermidis open reading frame (ORF) nucleic acid sequences which encode the amino acid sequences given in ABP35124 to ABP37960. The S. epidermidis sequences have antibacterial activity and can be used in gene therapy. The sequences can also be used in the diagnosis and treatment of bacterial infections, particularly S. epidermidis infections. The sequences can be used to screen for compounds able to interfere with the S. epidermidis life cycle or inhibit S. epidermidis infection.

NB. The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from the USPTO web site.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    32 KIDSIFNTIKKKYGMSKEEILILLLLL--EKGSMTLKEMDKYVHIKPYKRTRTYNNLVNL 89
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Staphylococcus epidermidis; SarA; staphylococcal accessory regulator A; agr; accessory gene regulator; antibacterial; SarA inhibitor; virulence gene; staphylococcal infection.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  16 QVKKFFRDTKKKFNLNYEEIYILNHILRSESNEISSKEIAKCSEFKPYYLTKALQKLKDL

                                                     The present sequence is given in a specification relating to a method for identifying inhibitors of SarA (staphylococcal accessory regulator) function involved in the expression of Staphylococcal virulence genes. The method comprises contacting a candidate inhibitor with a SarA binding site of the agr (accessory gene regulator) locus in solution and assessing the binding of the candidate inhibitor to the SarA binding site of the agr locus. The identified inhibitors are useful for preventing and treating staphylococcal infections.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                       open reading frame; ORF; bacterial infection;

The S. epidermidis sequences have antibacterial activity and can be used in gene therapy. The sequences can also be used in the diagnosis and treatment of bacterial infections, particularly S. epidermidis infections. The sequences can be used to screen for compounds able to interfere with the S. epidermidis lifection.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             epidermidis; open reading frame; ORF; bacterial infection; gene therapy.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ABN90538 to ABN93374 represent Staphylococcus epidermidis open reading frame (ORF) nucleic acid sequences which encode the amino acid sequences given in ABP35124 to ABP37960. The S. epidermidis sequences have antibacterial activity and can be used in gene therapy. The sequences can also be used in the diagnosis and treament of bacterial infections, particularly S. epidermidis infections. The sequences can for compounds able to interfere with the S. epidermidis life screen for cinhibit S. epidermidis infection.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ABN90538 to ABN93374 represent Staphylococcus epidermidis open reading frame (ORF) nucleic acid sequences which encode the amino acid sequences given in ABD53124 to ABB3706. The S. epidermidis sequences have antibacterial activity and can be used in gene therapy. The sequences can also be used in the diagnosis and treatment of bacterial infections, particularly S. epidermidis infections. The sequences can be used to screen for compounds able to interfere with the S. epidermidis life cycle or inhibit S. epidermidis infection.

N.B. The sequence data for this patent din or form part of the printed specification, but was obtained in electronic format directly from the

                                                                                                                                                                                                                                                                                                                                                                    The present sequence is that of a mutant RAT (regulatory of autolytic activity) protein of Staphylococcus aureus. It is encoded by a mutant RAT gene (see ABV7308) identified in a Th551 transposon library of S. aureus strain RN6390. Transposon insertion results in a truncated RAT coding sequence, yielding a protein missing the last C-terminal 13 amino acids of the wild-type protein sequence (see ABV73629). A RAT mutant strain displayed significantly enhanced autolytic activity as compared with the parent. In the presence of penicilin, the RAT mutant showed increased lysis as compared with wild-type S. aureus. The invention provides RAT gene and RAT mutant miclaic acid sequences, the polypeptides encoded by these genes, vectors and sequences, the polypeptides encoded by these genes, or the polypeptides encoded by the mutant gene, or the polypeptides cutolytic activity of S. aureus and other bacteria through interaction with the RAT gene, RAT mutant gene, or the polypeptides concoded by them. These agents are expected to be useful in the inhibition of growth of S. aureus and other bacteria and in the treatment of bacterial infection, and can be used alone or in combination with an antibiotic such as penicillin to promote lysis of the bacteria. The RAT gene and gene products are also useful as research tools to enhance the understanding of the autolytic research tools to enhance the understanding of the autolytic research tools to enhance the understanding of the autolytic
                                                                                                      New regulator of autolytic activity (RAT) nucleic acid sequences and polypeptides, useful for regulating the autolytic activity of bacteria, inhibiting bacterial growth and infectivity, or for treating bacterial
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ..

The present sequence is a novel regulatory of autolytic activity (RAI) protein of Staphylococcus aureus, which is involved in the control, modulation or regulation of autolytic activity. This the control, modulation or regulation of autolytic activity. This 17 kDa protein (predicted pl 7.38) is encoded by a novel gene (see ABV73907) that was identified in a Th51 transposon library of S. oureus strain RN6390 by screening for genes that affected expression of genes encoding the capsular polysaccharide of S. aureus. The invention provides RAI gene ARI mutant mucleic acid sequence, the polypeptides encoded by these genes, vectors and host cells, and a method of identifying agents that modulate the autolytic activity of S. aureus and other bacteria through interaction with the RAI gene, RAI mutant gene, or the polypeptides encoded by them: these agents are expected to be useful in the inhibition of growth of S. aureus and other bacteria and in the treatment of bacterial inflection. The RAI gene or gene products are also useful as
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 10 LVNATFQVKKFFRD-TXKKFNLNYEEIYILNHILRSESNEISSKEIAKCSEFKPYYLTKA 68
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   New regulator of autolytic activity (RAT) nucleic acid sequences and polypeptides, useful for regulating the autolytic activity of bacteria; inhibiting bacterial growth and infectivity, or for treating bacterial infection
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       autolytic activity; RAT; autolysis; antimicrobial;

    The RAT gene or gene products are also useful as
tools to enhance the understanding of the autolytic

                                                               Staphylococcus aureus regulator of autolytic activity (RAT)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          4
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           55 AKCSEFKPYYLTKALQXLKDLKLLSKKRSLQDERTVI-----VYVTDTQKANIQKLIS 107
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The present invention is related to a Lactococcus lactis nucleotide sequence (ABA90521) and related proteins (ABB53300-ABB55621). The nucleic acid sequence, is useful in the detection and/or amplification of nucleic acid sequence, particularly to identify Lactococcus lactis or related species. The proteins of the invention are useful for the biosynthesis or biodegradation of a composition of interest. The production helps research in lactic bacteria, particularly useful in the production of yogurt and cheese. bacteria, particularly useful in the production of yogurt and cheese. More: The sequence data for this patent is based on equivalent patent WO200177334 (published 18-07-2001) which is available in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     1 MSLANQIDQFLGTIMQ----FAENKHEILLGKCESDVKLTSTQEHILMLLAEQISTNAKI 56
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      1 MSKINDINDLVNATFQVKKFFRDTKKKFNLNYEEIYI-----LNHILRSESNEISSK-EI
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  New nucleotide sequence useful in the identification or Lactococcus lactis and related species -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       17;

The present invention relates to the genome sequence of Listeria monocytogenes EGD-e (see ABA03041). The genome sequence and fragments of it are useful for selecting probes and primers for detecting genes in L. monocytogenes and related organisms, and for studying genetic polymorphisms and other genomes. The present sequence is a protein encoded by the genome sequence of the present invention. Proteins expressed from the genome sequence are useful for raising specific antibodies, identification of L. monocytogenes and related organisms, and for biosynthesis and blodegradation, especially biosynthesis of Vitamin BL2. The genome sequence and proteins encoded by it are also useful for selecting compounds that regulate gene expression and cell replication and modulate L. monocytogenes. related diseases. In addition, the genome sequence and proteins encoded by it are useful in pharmaceutical and vaccines compositions for the treatment or prevention of infections by L. Mote: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO.

The province of the print of the printed specification, but was obtained in electronic format directly from WIPO.

The province of the print of the printed specification, but was obtained in electronic format directly from WIPO.

Beach No. 6380370

GENERAL INFORMATION:
GENERAL INFORMATION:
TITLE OF INVENTION: NUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO STAPHYLOCOCCUS
TITLE OF INVENTION: DEPERMIDIS FOR DIAGNOSTICS AND THERAPEUTICS
TITLE OF INVENTION: DATE: US/09/134,001C
CURRENT APPLICATION NUMBER: US 60/064,964
PRIOR FILING DATE: 1997-11-08
PRIOR FILING DATE: 1997-11-08
PRIOR FILING DATE: 1997-11-08
PRIOR FILING DATE: 1997-11-08
PRIOR FILING DATE: 1997-11-08
PRIOR FILING DATE: 1997-14-14
RECORD FOR THE SEQUENCE OF SEQUENCE OF SEQUENCE OF SEQUENCE OF SEQUENCE OF SEQUENCE OF SEQUENCE OF SEQUENCE OF SEQUENCE OF SEQUENCE OF SEQUENCE OF SEQUENCE OF SEQUENCE OF SEQUENCE OF SEQUENCE OF SEQUENCE OF SEQUENCE OF SEQUENCE OF SEQUENCE OF SEQUENCE OF SEQUENCE OF SEQUENCE OF SEQUENCE OF SEQUENCE OF SEQUENCE OF SEQUENCE OF SEQUENCE OF SEQUENCE OF SEQUENCE OF SEQUENCE OF SEQUENCE OF SEQUENCE OF SEQUENCE OF SEQUENCE OF SEQUENCE OF SEQUENCE OF SEQUENCE OF SEQUENCE OF SEQUENCE OF SEQUENCE OF SEQUENCE OF SEQUENCE OF SEQUENCE OF SEQUENCE OF SEQUENCE OF SEQUENCE OF SEQUENCE OF SEQUENCE OF SEQUENCE OF SEQUENCE OF SEQUENCE OF SEQUENCE OF SEQUENCE OF SEQUENCE OF SEQUENCE OF SEQUENCE OF SEQUENCE OF SEQUENCE OF SEQUENCE OF SEQUENCE OF SEQUENCE OF SEQUENCE OF SEQUENCE OF SEQUENCE OF SEQUENCE OF SEQUENCE OF SEQUENCE OF SEQUENCE OF SEQUENCE OF SEQUENCE OF SEQUENCE OF SEQUENCE OF SEQUENCE OF SEQUENCE OF SEQUENCE OF SEQUENCE OF SEQUENCE OF SEQUENCE OF SEQUENCE OF SEQUENCE OF SEQUENCE OF SEQUENCE OF SEQUENCE OF SEQUENCE OF SEQUENCE OF SEQUENCE OF SEQUENCE OF SEQUENCE OF SEQUENCE OF SEQUENCE OF SEQUENCE OF SEQUENCE OF SEQUENCE OF SEQUENCE OF SEQUENCE OF SEQUENCE OF SEQUENCE OF SEQUENCE OF SEQUENCE OF SEQUENCE OF SEQUENCE OF SEQUENCE OF SEQUENCE OF SEQUENCE OF SEQUENCE OF SEQUENCE OF SEQUENCE OF SEQUENCE OF SEQUENCE OF SEQUENCE OF SEQUENCE OF SEQUENCE OF SEQUENCE OF SEQUENCE OF SEQUENCE OF SEQUENCE OF SEQUENCE OF SEQUENCE OF SEQUENCE OF SEQUENCE OF SEQUENCE OF SEQUENCE OF SEQUENCE OF SEQUENCE OF SEQUENCE OF SEQUENCE OF SEQUE
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Sequence 5614, Application US/09134001C

Patent No. 6380370

GENERAL INFORMATION:

TITLE OF INVENTION: DOUGETE-Stamm et al

TITLE OF INVENTION: BEIDERWIDIS FOR DIAGNOSTICS AND THERAPEUTICS

FILE REFERENCE: GTC-007

CURRENT APPLICATION NUMBER: US/09/134,001C

Sequence 4980, Application US/09134001C
Patent No. 6.380370
GENERAL INFORMATION:
APPLICAMY: LUND DOUGETE-Stamm et al
TITLE OF INVENTION: NUCLETC ACID AND AMINO ACID SEQUENCES RELATING TO STAPHYLOCOCCUS
TITLE OF INVENTION: NUCLETC ACID AND AMINO ACID SEQUENCES RELATING TO STAPHYLOCOCCUS
TITLE OF INVENTION: BPIDERMIDIS FOR DIAGNOSTICS AND THERAPEUTICS
TITLE OF INVENTION: BPIDERMIDIS FOR DIAGNOSTICS AND THERAPEUTICS
CURRENT APPLICATION NUMBER: US 60/064,964
PRIOR APPLICATION NUMBER: US 60/065,779
PRIOR APPLICATION NUMBER: US 60/055,779
PRIOR FILING DATE: 1997-08-14
NUMBER OF SEQ ID NOS: 5674
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Sequence 8073, Application US/09328352

Patent No. 5693476
GENERAL INFORMATION:
APPLICANT: Scheller, Richard H.
TITLE OF INVENTION: Methods and Compositions for Modulation
TITLE OF INVENTION: of Vesicular Release
NUMBER OF SEQUENCES: 35
CORRESPONDENCE ADDRESS:
                                      15.4%; Score 88.5; DB 4; Length 136; 27.3%; Pred. No. 0.043; ive 21; Mismatches 42; Indels 9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           DB 1; Length 301;

NUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO PSEUDOMONAS
AERUGINOSA FOR DIAGNOSTICS AND THERAPEUTICS
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Sequence 6399, Application US/09107532A
Patent No. 6583275
GENBRAL INFORMATION:
APPLICANT: Lynn A Doucette-Stamm and David Bush
APPLICANT: Lynn A Doucette-Stamm and David Bush
TITLE OF INVENTION: NUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO
FITLE OF INVENTION: ENTEROCOCCUS FAECIUM FOR DIAGNOSTICS AND THERAPEUTICS
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                7
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         239 LYSTSLQMTKVYKPLLQALGLTYPQ-YIAMLVL-WERDGLTVGEISARMLTDPGSLTPLL 296

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Som, D.; Peterson, J.; Kerlavage, A.R.; Quackenbush, J.; Salzberg, S.; Hanson, M.; Vugt,

Nature 390, 580-586, 1997

A;Authors: Smith, H.O.; Venter, J.C.

A;Atle: Genomic sequence of a Lyme disease spirochaete, Borrelia burgdorferi.

A;Accession: G70163

A;Status: preliminary; nucleic acid sequence not shown; translation not shown

A;Molecule type: DMA

A;Residues: 1-2166 <KLE>

A;Cross-;references: GB:AE001153; GB:AE000783; NID:g2688419; PIDN:AAC66876.1; PID:g2688426

"C in FUNCTION: Sbocco leaves DNA hairpin structures. These structures

recombination reactions. The complex acts as a 3'->5' double

strand exonuclease that can open hairpins. It also has a 5'

single-strand endonuclease activity (By similarity).

- SUBDNIT: Heterodimer of sboc and sbob (By similarity).

- SIMILARITY: BELONGS TO THE SMC FAMILY. SBCC SUBFAMILY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            EMBL; Absurvi, 29, 236.

Nature 390:580-586(1997)
-!- FUNCTION: REQUIRED FOR EFFICIENT DNA REPAIR; IT CATALYZES THE
UNWINDING OF DOUBLE-STRANDED DNA AND THE CLEAVAGE OF SINGLE-
STRANDED DNA AND IT STIMULATES LOCAL GENETIC RECOMBINATION.
ALL OF THESE ACTIVITIES REQUIRE CONCOMITANT HYDROLYSIS OF ATP
(BY SIMILARITY).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     (BY SIMILARITY).

-!-SUBDOXII: Consists of at least two heavy chains and a number of intermediate and light chains.
-!-DOMAIN: Dynain heavy chains probably consist of an N-terminal stem (which binds cargo and interacts with other dynain components), and the head or motor domain. The motor contains six tandemly-linked AAA domains in the head, which form a ring, A stalk-like structure (formed by two of the coiled coil domains) protrides between AAA 4 and AAA 5 and terminates in a microtubule-binding site. A seventh domain may also contribute to this ring; it is not clear whether the N-terminus or the C-terminus forms this extra domain. There are four well-conserved and two non-conserved ATPsae sites, one per AAA domain. Probably only one of these (within AAA)

Produces force towards the minus ends of microtubules. Dynein has APPase activity, the force-producing power stroke is thought to occur on release of ADP.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   1 (ICS1), also known as primary ciliary dyskinesia (PCD). The phenotype of this autosomal recessive disease is characterized by axonemal abnormalities of respiratory cilia and sperm tails leading to bronchiectasis and sinusitis, which are sometimes associated with situs inversus (Kartagener syndrome) and male
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          [1]

-!- FUNCTION: Involved in DNA double-strand break repair (DSBR). The rad50/mrell complex possesses single-strand endonuclease activity and ATP-dependent double-strand-specific exonuclease activity. Rad50 provides an ATP-dependent control of mrell by unwinding and/or repositioning DNA ends into the mrell active site (By

-!- FUNCTION: DNA POLYMERASE III IS A COMPLEX, MULTICHAIN ENZYME
RESPONSIBLE FOR THE REPLICATIVE SYNTHESIS IN BACTERIA.
THIS DNA POLYMERASE ALSO EXHIBITS 3' TO 5' EXONUCLEASE ACTIVITY.
-!- CATALYTIC ACTIVITY: N deoxynucleoside triphosphate = N diphosphate
                                                                                                                                                                                                                                                                                                                                     SUBUNIT: DNA polymerase III contains a core (composed of alpha, epsilon and theta chains) that associates with a tau subunit. This core dimerizes to form the POLIII' complex. PolIII' associates with the gamma complex (composed of gamma, delta, delta', psi and chi chains) and with the beta chain to form the complete DNA polymerase III complex (By similarity).

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
